### Digital Planning of Aligners and Damon Ultima Brackets Using the Spark Approver

Digital planning of orthodontic appliances offers the significant advantage of visualizing the expected treatment outcome. It enables the fabrication of highly precise appliances, thereby improving the overall quality of the treatment results.

The production of aligners without a digital workflow is virtually impossible. However, digital planning also significantly enhances the efficiency of bracket-based orthodontic treatments.

With the Spark Approver, we now have a unique opportunity to plan **both aligner treatments and fixed** appliance therapies (such as metal brackets) within a **single platform**. This integration supports a streamlined and efficient clinical workflow.

This course focuses on digital planning for both aligners and fixed bracket systems (ODB – **indirect bonding**), offering valuable tips and tricks for everyday clinical practice

**Location - Keight Hotel Opatija**

**Course Fee - 325€\***

\*Price includes lecture, coffee breaks, lunches and 1 Case ODB free of charge\*\*

\*\*FOC case needs to be ordered by end of 11/2025
